

AURORA

*Assisted Update Review Of
Resource Allocation*

Project Plans Fall Behind Reality

*Project updates live in emails and meeting notes,
but **the official task plan only changes when PM manually updates it.***

AURORA

A planning assistant that ***turns project emails and meeting notes*** into ***structured, evidence-backed task updates***, while ***keeping the PM fully in control***.

Human-Reviewed AI Plan Updates

AURORA extracts ***task, owner, due date and status changes***, then ***creates draft updates for PM review*** before touching the official plan.

AI Drafts, Human Approval

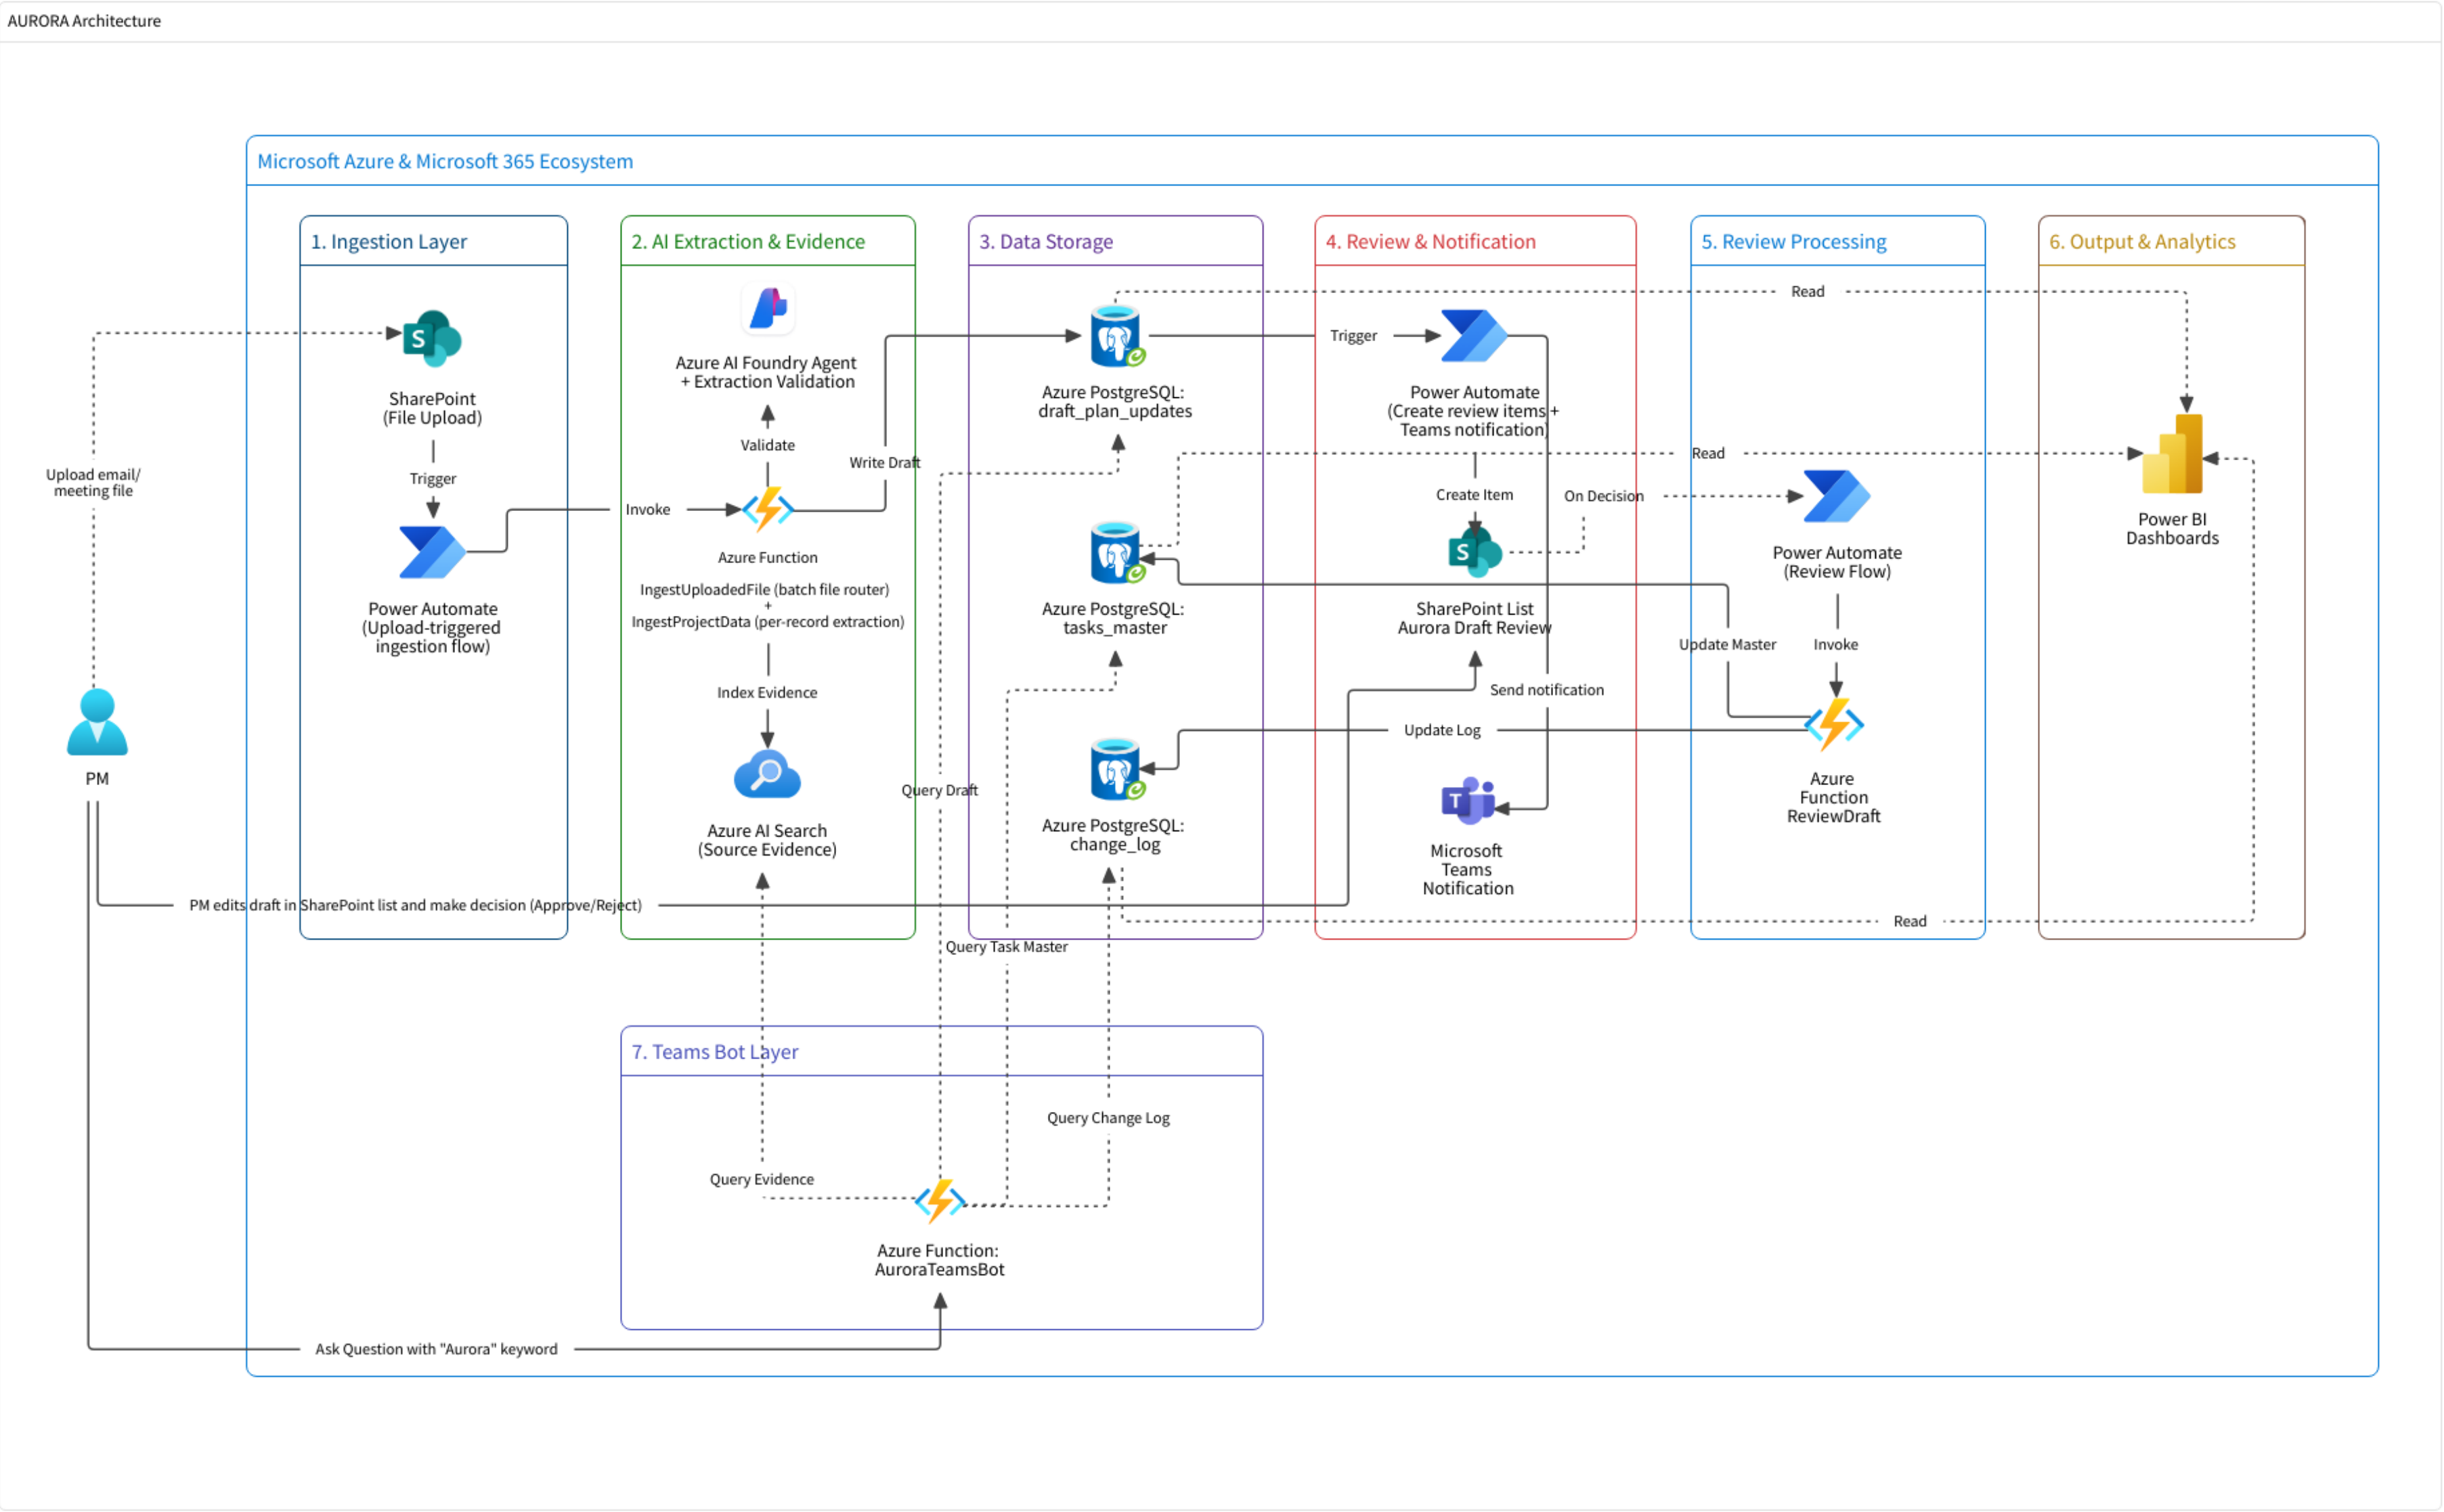

The AI never directly overwrites the plan.

*Every **proposed update** has **source evidence**, **confidence**, **clarification status**, and a **PM decision**.*

Reliable Plan, Audit Trail, Faster PM Workflow

AURORA keeps the master plan current, ***records who approved what, preserves evidence***, and ***gives PMs a dashboard*** and ***Teams assistant for project questions***.

Built On The Microsoft Stack

The architecture starts with meeting-note or email file upload in **SharePoint**. **Power Automate** invokes **Azure Functions** to extract plan updates using **Azure AI Foundry** and validation rules, stores draft updates in **Azure PostgreSQL**, routes them to a **SharePoint** human review queue, and updates the official project plan only after PM approval. **Power BI** and **Teams** provides conversational access, and **Azure AI Search** stores searchable source evidence.

This is more than summarization

It is ***governed meeting-to-plan translation***
with ***approval, audit trail, and live reporting.***
